

PRODUCT PRESENTATION · EXECUTIVE BRIEF

Apartify Africa

The apartment leasing marketplace for Nigeria — browse, book and pay for verified apartments in Naira, with escrow-protected payments for hosts and guests.

React Native App

Spring Boot API

Admin Dashboard

Live on Railway + Vercel

Why Nigeria needs an apartment marketplace

30+

MILLION HOUSEHOLDS RENT THEIR HOMES

Renting is the dominant housing model — demand is massive and persistent.

80%

OF RENT PAYMENTS ARE STILL CASH OR BANK TRANSFER

Most listings live on WhatsApp & informal agent networks — no trust, no structure.

₹ → ₦

₦ DENOMINATED WALLETS & ESCROW

Pay in Naira via bank transfer, cards or Flutterwave virtual accounts.

3/3

APP: API: DASHBOARD

A complete, production-shaped platform — not a prototype.

"Everyone has a 'house agent' story — scams, double payments, ghost listings."

Apartify solves this with verified listings, secure in-app payments and escrow release — the infrastructure trust that a fragmented market is missing.

One platform, three products

A full marketplace stack — guest app, host tools, and operations control room.

Mobile App

REACT NATIVE · EXPO SDK 54

26 screens covering the full guest & host journey — sign-up to booking to payment to hosting.

- ▶ Explore, filters & search
- ▶ Favorites & wallet
- ▶ Bookings & payments
- ▶ Host listings & uploads

Backend API

SPRING BOOT · JAVA 21

Secure REST API with JWT auth, wallet & escrow engine, payments and full admin controls.

- ▶ JWT auth · roles: Guest / Host / Admin
- ▶ Wallet, transactions, escrow
- ▶ Flutterwave + Paystack
- ▶ Audit logging & rate limiting

Admin Dashboard

VITE · REACT 19 · TAILWIND

Operations control room for moderating the marketplace and managing money flows.

- ▶ KPIs, charts & revenue
- ▶ Users, listings & bookings CRUD
- ▶ Complete / cancel bookings → escrow
- ▶ Transactions & audit logs

Guest experience

Sign up & sign in

Email, Google or Apple. Password recovery & token refresh.

Explore & save

Browse listings, filter & search, save favorites. Works before login too.

Book & pay

Card or bank transfer, funded by wallet or Flutterwave virtual account, ₦.

Track & confirm

Booking history, confirmation, escrow-protected until the booking completes.

BUILT-IN TRUST

- ▶ Guest browsing without an account lowers the first step
- ▶ Favorites saved locally & synced for returning users
- ▶ Notifications keep users informed of booking status
- ▶ Naira pricing everywhere — no currency confusion

WHERE WE SHINE

- ▶ 3 sign-in methods reduce friction & drop-off
- ▶ Escrow removes the #1 fear: paying a stranger
- ▶ Full payment trail: deposit → hold → release → receipt
- ▶ Offline-first sync keeps data consistent on flaky networks

Host experience & the escrow money engine

FOR HOSTS

- ▶ Upload listings with up to 5 photos & image compression
- ▶ My Listings + Host Booked Listings dashboard
- ▶ Full booking details for every reservation
- ▶ Payouts to host wallet from escrow release
- ▶ Host profile to build reputation & reviews

MONETISATION (ALREADY IN CODE)

10% platform fee

Escrow release → host payout

Refunds on cancellation

The fee is already applied on every escrow release — a real revenue line, not a plan.

MONEY FLOW

1

Guest pays — wallet, card or bank transfer (Flutterwave / Paystack)

2

Escrow hold — funds parked safely as ESCROW_HOLD

3

Booking completes — escrow released to host wallet

4

Fee taken — 10% platform fee; host receives the balance

5

Cancel? — automatic refund back to the guest

Architecture & tech stack

MOBILE

- ▶ React Native 0.81 · Expo SDK 54
- ▶ React Navigation v6 (tabs + stack)
- ▶ AsyncStorage + secure local storage
- ▶ Expo notifications, image picker
- ▶ Offline-first hybrid sync services

API

- ▶ Spring Boot · Java 21 · PostgreSQL
- ▶ Spring Security · JWT (BCrypt, 1h expiry)
- ▶ Escrow, wallet & transaction engine
- ▶ Swagger/OpenAPI docs
- ▶ Rate limiting · audit logs · 10 test classes

DASHBOARD

- ▶ Vite + React 19 + Tailwind
- ▶ Recharts analytics & KPIs
- ▶ Radix UI + shadcn-style components
- ▶ Role-based admin access

DEPLOYMENT & PAYMENTS INFRASTRUCTURE

Railway — API (Docker)

Vercel — Dashboard

PostgreSQL

Flutterwave v3

Paystack

SendGrid / Postmark email

Local dev via Docker Compose

Admin dashboard — full marketplace control

MODULE	WHAT THE OPS TEAM CAN DO
Dashboard	KPI cards + charts — users, listings, bookings, revenue
Users	Search, change roles (Guest/Host), delete with cascade
Listings	View all, create on behalf of hosts, delete
Bookings	Complete (release escrow) or cancel (trigger refund)
Transactions	Every deposit, withdrawal, fee & payout in ₦
Audit Logs	Who did what, when, from where
Admins	Add, suspend & manage admin accounts

"We can run the entire marketplace from one screen — moderate content, manage users and control every Naira that moves."

KPIs are computed live from the backend (`/api/admin/stats`) — revenue, active/completed bookings, hosts, guests and more.

Security & trust foundations

AUTHENTICATION

- ▶ BCrypt password hashing
- ▶ JWT with 1-hour expiry & refresh
- ▶ Role-based access: Guest / Host / Admin
- ▶ Google & Apple sign-in

PAYMENT SAFETY

- ▶ Escrow holds until booking completes
- ▶ Verified webhooks (Flutterwave verif-hash)
- ▶ Full transaction trail & refunds
- ▶ Cards processed via certified providers

GOVERNANCE

- ▶ Audit logging on admin actions
- ▶ Rate-limited password resets
- ▶ CORS origins controlled via env
- ▶ Production profile: schema validation on

Security is a selling point.

In a market with high fraud anxiety, "we hold the money until you confirm" is the core marketing message — not just a feature.

Current status & milestones

✓ SHIPPED & WORKING

- ▶ Full guest + host journeys in the mobile app (v1.0.8)
- ▶ Escrow, wallet & 10% platform fee live in the code
- ▶ Flutterwave & Paystack integrations wired up
- ▶ Admin dashboard with 7 modules on Vercel
- ▶ Backend deployed on Railway with PostgreSQL
- ▶ Google + Apple auth, notifications, deep linking
- ▶ Offline-first sync for listings & transactions

🚧 IN PROGRESS / WATCH LIST

- ▶ App Store & Play Store submission (privacy data configured)
- ▶ Switch default payment provider → live production keys
- ▶ Move listing photos to cloud storage (currently local files)
- ▶ Hardening: rotate seeded admin credentials & JWT secret
- ▶ Analytics & crash reporting (Sentry / Firebase)
- ▶ Load & performance testing before public launch

ADMIN MODULES

How we improve the app

Q1 · LAUNCH-READY POLISH

- ▶ Live payment keys + automated refunds end-to-end
- ▶ Cloud image storage (Cloudinary/S3) with CDN
- ▶ Push notifications for booking status changes
- ▶ Analytics (funnels) + crash reporting + feature flags

Q2 · TRUST & CONVENIENCE

- ▶ Verified badge & ID checks for hosts
- ▶ Availability calendar on listings (react-native-calendars)
- ▶ Guest ↔ host in-app chat
- ▶ One-tap rebook from booking history

Q3 · MARKETPLACE DEPTH

- ▶ Map-based search & area guides
- ▶ Rich filters: price, amenities, property type, location
- ▶ Host web dashboard + bulk listing upload
- ▶ Reviews with photos + host response

Q4 · SCALE

- ▶ Web version of the consumer app (SEO surface)
- ▶ Dynamic pricing suggestions for hosts
- ▶ Referral & loyalty programmes
- ▶ Featured/boosted listings as paid product

How we get more users

DEMAND — ATTRACT GUESTS

- ▶ Launch on Google Play + App Store with ASO
- ▶ App Store optimisation: keywords, screenshots, ratings
- ▶ Instagram / TikTok real-estate content & area tours
- ▶ Neighbourhood guides blog → SEO landing pages
- ▶ University & young-professional outreach (NYSC, tech hubs)

SUPPLY — ONBOARD HOSTS

- ▶ Free listings for the first 50 hosts
- ▶ Partner with agents & property managers
- ▶ White-glove listing uploads (we upload for you)
- ▶ Corporate relocation partnerships
- ▶ Host referral rewards (free months)

RETENTION — MAKE THEM STAY

- ▶ Referral programme: both sides rewarded
- ▶ Escrow trust story in every campaign
- ▶ Booking-status push notifications
- ▶ Wallet balance top-up prompts & promos
- ▶ Email lifecycle: abandon-browse, post-booking, re-engage

Chicken-and-egg strategy:

Seed supply first (free/assisted listings in 2–3 neighbourhoods), then focus acquisition on those areas so every new guest finds inventory.

MEASURING SUCCESS

KPIs we will track

DAU / MAU

ENGAGEMENT

Activation, retention & session depth across guest & host.

GMV (₦)

GROSS BOOKING VALUE

Total Naira moved through escrow each month.

Conversion

BROWSE → BOOKING

Explore → book funnel, tracked per step.

Active listings

SUPPLY HEALTH

Listings per neighbourhood vs. demand.

Escrow revenue

10% PLATFORM FEE

Revenue per completed booking.

NPS

TRUST SCORE

Guest & host satisfaction — the real moat.

NORTH-STAR METRIC

Completed escrow bookings per week. It is the only number that proves both sides of the marketplace are transacting with trust — every other metric feeds it.

The ask — what we need to go to market

1

Green-light the launch.

App Store / Play Store submission + production payment keys.

2

Seed supply budget.

Assist the first 50 hosts with listing uploads in 2–3 launch neighbourhoods.

3

Marketing runway.

Social content, ASO and one launch campaign per area.

4

Operations capacity.

An admin/support owner to moderate listings, resolve disputes & release escrow.

THE RETURN

A differentiated, trust-first marketplace in an underserved market — with the revenue engine (escrow fee) already built and the operating platform already live.

Every completed booking pays us **10%**. More users → more escrow → more revenue, compounding.

THANK YOU

Let's change how Nigeria finds a home.

Questions, feedback and ideas welcome. The product is built, the engine is running — the next step is putting it in front of the market.
